TITLE: Stability of the polycondensation cation-exchangers KU-5, KU-6, and EO-7 to radiation

SOURCE: Zhurnal fizicheskoy khimii, v. 39, no. 3, 1965, 771-773

TOPIC TAGS: cation exchange resin, polycondensation, radiation stability, electron bombardment, ionizing radiation, ion exchange capacity, KU-5 resin, KU-6 resin, EO-7 resin

ABSTRACT: The article discusses the effects of ionizing radiation consisting of a flux of accelerated electrons on the cation exchange resins KU-5, KU-6, and EO-7, particularly on the change in their ion-exchange capacity, swelling, and change in mass as a function of the dose. An IFKh accelerator was used. The dose rate was  $1 \times 10^{19}$  eV/g-sec; the dose was determined by the irradiation time. It was found that when irradiated with a dose of  $0.2-1.5 \times 10^{22}$  eV/g, the resins EO-7 and KU-5 in distilled water and in 1.0 N hydrochloric acid showed a certain decrease in their exchange capacity (5-20%) and that their swelling changed, whereas the ion-exchange properties of KU-6G remained the same. The stability of KU-5G and KU-6G

Card 1/2

L 41689-65

ACCESSION NR: AP5008919

to radiation is attributed to the special electronic structure of the fused rings of naphthalene and acenaphthene (KU-5G and KU-6G) and to the introduction of hydroquinone (labile electrons) into the system (EO-7). "The authors express their deep appreciation to A. B. Pashkov and M. A. Zhukov for the resin samples supplied for the investigation." Orig. art. has: 2 figures and 2 tables.

Cranial and Cerebral (Cont.)

SOV/6055

clinical course, therapy, and outcome of infected cranial and cerebral injuries in subjects affected by penetrating radiation. Special features of the clinical phenomena and diagnostics of cerebral injuries and complications due to intracranial infection in acute radiation sickness are dealt with, and results of surgical and several kinds of antibiotic therapy are given. Basic methods for the use of antibiotics are presented. In the experiments, cranial and cerebral injuries were infected by cultures of suppurative infection-producing agents, bone splinters were left in the wounds, and primary surgical treatment was delayed for three days after irradiation and injury. Even under these conditions, satisfactory therapeutic results were obtained. The experiments indicate the desirability of extending the indications for the use of primary blind sutures [pervichnykh glukhikh shvov]. This investigation of cranial and cerebral injuries combined with radiation effects was conducted at the Academy of Military Medicine of the Order of Lenin imeni S. M. Kirov by a collective of authors under the leadership of Doctor of Medical Sciences N. N. Aleksandrov. There are 850 references: 579 Soviet, 219 English, 29 German, 20 French, 1 Italian, 1 Swedish, and 1 Hungarian.

Inst : Moscow Chemico-Technological Institute

Title : Complex Compound of Nickel Ion with Chlorine Ion

Orig Pub : Tr. Mosk. khim.-tekhnol. in-ta, 1956, No 22, 89-96

Abstract : As a result of study of absorption spectra of  $\text{NiCl}_2$  solution on varying the concentrations of  $\text{Ni}^{2+}$  and  $\text{Cl}^-$ , and the temperature, and also on the basis of results of calorimetric investigations (definite correlation between heat of complex formation and concentration ratios of  $\text{Cl}^-$  and  $\text{Ni}^{2+}$ ) it has been ascertained that there is present in  $\text{NiCl}_2$  solutions a complex ion  $(\text{NiCl}_4)^{2-}$  (I). Stability of I increases with temperature and in the presence of  $\text{NO}_3^-$  ion, and decreases sharply in the presence of  $\text{Cd}^{2+}$ . Heat of formation of I is 2500-2600 cal/mole. Instability constant of I with an excess of  $\text{Cl}^-$  is  $\sim 0.3$ .

Author : Kiseleva Ye.V.

Inst : Moscow Chemico-Technological Institute

Title : Interaction of  $\text{NO}_3^-$  Ion with  $\text{Cl}^-$  Ion

Orig Pub : Tr. Mosk. khim.-tekhnol. in-ta, 1956, No 22, 97-99

Abstract : To explain the enhanced stability of  $(\text{CuCl}_4)\text{Cu}$  on addition of  $\text{NO}_3^-$  ion a study was made of the nature of interaction between  $\text{NO}_3^-$  and  $\text{Cl}^-$ . On the basis of results of determinations of the heat of interaction of the above-stated ions the author reaches the conclusion that there takes place, on interaction, the removal of 1 molecule  $\text{H}_2\text{O}$  from the hydrate shell of  $\text{Cl}^-$  ( $\Delta H_1 = 8000$  cal/mole) and the addition of 1 molecule  $\text{H}_2\text{O}$  to the hydrate shell of  $\text{NO}_3^-$  ( $\Delta H_2 = -9900$  cal/mole); the summative heat effect of the process  $\text{Cl}_I^- + \text{NO}_3^- \rightarrow \text{Cl}_{II}^- + \text{NO}_3^-$  (index "I" denotes the state of

$\text{NO}_3^-$  and  $\text{Cl}^-$  prior to mixing of solutions which contain them, and index "II" -- after the mixing) is  $\Delta H = \Delta H_1 + \Delta H_2 = 1900$  cal/mole. Decrease in "affinity" of  $\text{Cl}^-$  to  $\text{H}_2\text{O}$  in the presence of  $\text{NO}_3^-$ , according to the author, explains the enhanced stability of  $(\text{CuCl}_4)\text{Cu}$  in solutions containing  $\text{NO}_3^-$ .

TITLE: The Reaction Heat of Ions in Aqueous Solutions (Teplota vzaimodeystviya ionov v vodnykh rastvorakh)

PERIODICAL: Nauchnyye doklady vysshey shkoly, Khimiya i khimicheskaya tekhnologiya, 1958, Nr 3, pp. 405-407 (USSR)

ABSTRACT: It was found that the difference between the heat of solution of salts in electrolyte solutions and in water is proportional to the concentration of free ions in the solution and does not depend on their nature. This difference was symbolized by  $\Delta H_c$  and called "heat of solution resistance" (teplota soprotivleniya rastvora).  $\Delta H_c$  increases with the molecular weight of the dissolved salts. As  $\Delta H_c$  is proportional to the ion concentration the concentration of the undissociated molecules as well as the heat of formation of compounds forming from the ions in aqueous solution may be determined from it. These results were obtained by the dissolution of  $\text{NaNO}_3$  in  $\text{NaNO}_3^-$ ,  $\text{NaCl}^-$ ,  $\text{NH}_4\text{NO}_3^-$ ,  $\text{Cd}(\text{NO}_3)_2^-$ ,  $\text{Mg}(\text{NO}_3)_2^-$ ,  $(\text{NH}_4)_2\text{SO}_4^-$ ,  $\text{CdCl}_2$  and  $\text{CuCl}_2$ , and of  $\text{NaCl}$  in  $\text{NaCl}^-$ ,

Card 1/2

SOV/156-58-3-1/52

The Reaction Heat of Ions in Aqueous Solutions

$\text{Mg}(\text{NO}_3)_2^-$ ,  $(\text{NH}_4)_2\text{SO}_4^-$ , and  $\text{Cd}(\text{NO}_3)_2^-$  solution. One table shows: the electrolyte of the initial solution, its concentration, the heat of solution found,  $\Delta H_c$ , the normality  $n$  and the coefficient  $A = \frac{\Delta H_c}{n}$ . As is shown in table 2 and by a diagram, the quantity  $A$  increases with the molecular weight of the dissolved salt. The physical sense of the "heat of resistance"  $H$  is not yet clear; the determination of this quantity can apparently be of help in solving a number of problems. There are 1 figure, 2 tables, and 9 references, 7 of which are Soviet.

TITLE:

Calorimetric Method of Determining the Ion Associates Present in Electrolyte Solutions (Kalorimetricheskiy metod opredeleniya nalichiya assotsiatsiy ionov v rastvorakh elektrolitov)

PERIODICAL:

Nauchnyye doklady vysshey shkoly. Khimiya i khimicheskaya tekhnologiya, 1958, Nr 4, pp 621-623 (USSR)

ABSTRACT:

A new method of quantitative determination of the ion numbers in solutions by means of the so-called "heat of resistance  $\Delta H_c$ " was devised. The difference of the  $\Delta H_c$  heat is proportional to the ionic concentrations ( $n_i$ ) and is expressed by the equation (1):  $\Delta H_c = A \cdot n_i$ . (1)

In formula (1) A denotes the proportionality coefficient. The method suggested was applied to the following solutions:  $CdCl_2$ ,  $CuCl_2$ ,  $CdJ_2$ ,  $Na_2SO_4$ ,  $K_2SO_4$ . The following equilibria and the corresponding dissociation constants were given for the solution  $CdCl_2$ :

Card 1/3

SOV/156-58-4-3/49

Calorimetric Method of Determining the Ion Associates Present in Electrolyte Solutions

The ion associates in solutions of  $\text{CuCl}_2$  and  $\text{CdJ}_2$  are formed in a similar way. The ionic concentrations in the solutions of  $\text{CdCl}_2$ ,  $\text{ZnCl}_2$ ,  $\text{CuCl}_2$  and  $\text{NiCl}_2$  was determined by the calorimetric method, and then compared to the data of calorimetrically determined concentrations. The results obtained from the investigations show that the ion associates in aqueous solutions form the following stability series:  $\text{CdCl}_2$ ,  $\text{ZnCl}_2$ ,  $\text{CuCl}_2$ ,  $\text{NiCl}_2$ .

By means of the quantity  $\Delta H_c$  and the ionic concentrations ( $n_i$ ) calculated therefrom the dependence of the activity

Card 2/3

SOV/156-58-4-3/49

Calorimetric Method of Determining the Ion Associates Present in Electrolyte Solutions

coefficients on the concentration of the electrolytes was calculated. The results show that the activity coefficients decrease with decreasing ionic concentrations in the electrolyte solutions.

There are 2 tables and 5 references, 4 of which are Soviet.

Orig Pub : Arkhiv patologii, 1957, 19, No. 7, 44-52.

Abstract : Cotton plugs, injected into the cerebral aqueducts of 24 puppies, aged 2 weeks to 1½ months, obstructed the drawing off of "liquor" from the laterals and the third ventricles. In 24-36 hours after the operation, an acute edema of the brain developed. From the 3rd to the 8th day, the edema decreased, and hyperemia of the medulla developed. On the 12-30th day, the vessels and capillaries became dilated due to prolonged asphyxia. In the puppies that survived 9-30

TITLE: Multi-support stand. Class 65, No. 175838 [announced by Kherson Design and Construction Technological Institute (Khersonskiy proyektno-konstruktorskiy tekhnologicheskii institut)]

SOURCE: Byulleten' izobreteniy i tovarnykh znakov, no. 20, 1965, 130

TOPIC TAGS: shipbuilding engineering, ship component, automation

ABSTRACT: This Author Certificate presents a multi-support stand with frame supports for placing of ship sections. To mechanize the placing of the supports under the ship sections, the frame supports are pivoted below the floor level and are kinematically connected to the push rod of a hydraulic cylinder which synchronously lifts the supports to a vertical position and lowers them to a horizontal position until the back sides of the supports are at floor level and form a flat platform (see Fig. 1).

Free Oscillations of a Shell Reinforced with Stiffening Ribs

PERIODICAL:

Dopovidi Akademii Nauk Ukrain's'koi RSR, 1959, Nr 7,  
pp 730-735 (UkrSSR)

ABSTRACT:

A general method is described for determining the frequencies of free oscillation of a shell with an arbitrary inner surface, reinforced by stiffening ribs placed along the lines of curvature of the inner surface. This method is developed in detail for a sloping circular cylindrical shell, reinforced by longitudinal equidistant stiffening ribs. As a special case the author discusses the problem of the oscillations of a sloping circular cylindrical shell without stiffening ribs, the solution of which is given in O.D. Oniashvili's monograph /3/. The formula for the frequency of flexural oscillations obtained by the author agrees with the corresponding formula of O.D. Oniashvili. The variational method is applied for

TITLE: The effect of reinforcing ribs on the frequency of natural vibrations of a shallow cylindrical shell

SOURCE: Teoriya plastin i obolochek; trudy II Vsesoyuznoy konferentsii, L'vov, 15-21 sentyabrya 1961 g. Kiev, Izd-vo AN USSR, 1962, 289-294

TEXT: The variational equation for a shell with transversal ribs is formulated, assuming small deformations and conservation of normal element. The displacements are represented as double trigonometrical series for the case of hinged edges, and an infinite system of linear equations is obtained. In the case of a single rib in the middle of the shell, equations for natural frequencies are given. In a numerical example the presence of a rib is found to decrease the frequency for certain values of the parameters. There is 1 table.

TITLE:

Some Stroboscopic Studies of Spectra of Alternating Current Arc

PERIODICAL:

Inzhenerno-fizicheskiy zhurnal, 1959, Nr 7, pp 96 - 99 (USSR)

ABSTRACT:

The author applied the method of stroboscopic recording of spectra to the study of an effect of tin in copper-zinc-tin alloys on the intensity of spectral lines of zinc and copper. Spectra of alternating current arc, which correspond to discharges of either sign, as well as spectra obtained in the time base of these discharges were studied by means of a spectrograph of the ISP-22 type. It was found that the intensities of spectral lines were different in discharges when a specimen under investigation served as a cathode and as an anode. An analogous phenomenon was earlier described by V.K. Prokof'yev [Ref 1]. Excitation conditions proved to be more "rigid" in discharges when the specimen served as a cathode of the arc. The absolute intensity of spectral lines of zinc and copper atoms increased with an increasing concentration of tin in the alloy, in both cases of discharges, although in a different degree, depending on whether the specimen was a cathode or anode. The changes of
